HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

1. NATURE OF OPERATIONS

Happy Creek Minerals Ltd. (“Happy Creek” or the “Company”) was incorporated under the laws of British Columbia on November 17, 2004 and is in the exploration stage of the development of its mineral property interests. The Company’s registered office is Suite 460 – 789 West Pender Street, Vancouver, British Columbia, V6C 1H2.

The Company’s principal business activity is the exploration and development of mineral properties. At the date of these statements, the Company has not been able to identify a known body of commercial grade ore on any of its properties and the ability of the Company to recover the costs it has incurred to date on these properties is dependent upon the Company being able to identify a commercial ore body, to finance its exploration and development costs and to resolve any environmental, regulatory, or other constraints which may hinder the successful development of the property. The Company is in the development stage with no source of operating revenue and is dependent upon equity financing on terms that are acceptable to the Company, to maintain its current operations. The Company is listed on the TSX Venture Exchange (“TSX-V”) under the symbol “HPY.V”.

2. GOING CONCERN

These financial statements have been prepared on the basis of accounting principles applicable to a going concern, which assumes that the Company will continue in operation for the foreseeable future and will be able to realize its assets and discharge its liabilities in the normal course of operations as they come due. In assessing whether the going concern assumption is appropriate, management takes into account all available information about the future, which is at least, but is not limited to, twelve months from the end of the reporting period. Management is aware, in making its assessment, of material uncertainties related to events or conditions that cast significant doubt upon the entity's ability to continue as a going concern.

The Company’s ability to continue to meet its obligations and carry out its planned exploration activities is uncertain and dependent upon the continued financial support of its shareholders and on securing additional financing. There is, however, no assurance that any such initiatives will be sufficient and, as a result, there is significant doubt regarding the going concern assumption and, accordingly, the ultimate appropriateness of the use of accounting principles applicable to a going concern. These financial statements do not reflect the adjustments to the carrying values of assets and liabilities and the reported expenses and balance sheet classifications that would be necessary if the Company were unable to realize its assets and settle its liabilities as a going concern in the normal course of operations for the foreseeable future. These adjustments could be material.

3. BASIS OF PRESENTATION

These unaudited interim financial statements of the Company have been prepared in accordance with International Financial Reporting Standards (“IFRS”), as issued by International Accounting Standards Board (“IASB”), applicable to the preparation of interim

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

financial statements, including International Accounting Standard (“IAS”) 34 *Interim Financial Reporting*. The unaudited interim financial statements do not include all of the disclosures required for a complete set of annual financial statements and should be read in conjunction with the audited annual financial statements for the year ended January 31, 2015, which have been prepared in accordance with IFRS as issued by the IASB.

The accounting policies below have been applied to all periods presented in these financial statements; and are based on IFRS as issued by the IASB and Interpretations of the International Financial Reporting Interpretation Committee (“IFRIC”).

The policies applied in these financial statements are based on IFRS issued and outstanding as of October 31, 2015.

3.1 Basis of measurement

These financial statements have been prepared using the measurement basis specified by IFRS for each type of asset, liability, revenue and expense. Certain items are stated at fair value.

3.2 Significant judgments, estimates and assumptions

The preparation of the Company’s financial statements in conformity with IFRS requires management to make judgments, estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Estimates and assumptions are continually evaluated and are based on management’s experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Actual results could differ from these estimates.

The areas which require management to make significant judgments, estimates and assumptions in determining carrying values include, but are not limited to:

(i) Going concern

The assessment of the Company’s ongoing viability as an operating entity and determination of the related disclosures require significant judgment.

(ii) Exploration and evaluation properties and impairment

The Company is required to make significant judgments regarding the capitalization of the costs incurred in respect to its exploration and evaluation properties. The Company is also required to make significant judgments on the ongoing feasibility of mineral exploration, and whether there are indicators that the development of a specific area is unlikely and exploration and evaluation properties should be impaired. Management has assessed impairment indicators on the Company’s exploration and evaluation properties and has concluded that no impairment indicators existed as of October 31, 2015.

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

4. SIGNIFICANT ACCOUNTING POLICIES

These financial statements have been prepared at its historical cost convention except for certain financial instruments which are measured at fair value.

4.1 Cash and Cash Equivalents

Cash and cash equivalents include cash on hand, demand deposits and short-term, highly liquid investments that are readily convertible to known amounts of cash within ninety days of purchase.

4.2 Equipment

Equipment is recorded at cost and carried net of accumulated depreciation and accumulated impairment losses. Costs of additions and improvements are capitalized. An item of equipment is derecognized upon disposal, or impaired when no future economic benefits are expected to arise from continued use of the asset. Any gain or loss on disposal of the asset, determined as the difference between the proceeds and the carrying amount of the asset is recognized in profit or loss.

	Depreciation Rate
Computer equipment	45%
Off-road vehicle	12%
Mobile equipment	20%

The Company provides for depreciation using the straight line method at rates designed to depreciate the cost of individual items over their estimated useful lives. Depreciation on operating assets is included in the statements of net loss as a component of office and administrative expenses. Depreciation of assets utilized in mineral exploration activities is capitalized as a cost of mineral properties.

4.3 Exploration and Evaluation Properties

- (i) Pre-license costs:
Costs incurred before the Company has obtained the legal right to explore are expensed as incurred.

- (ii) Exploration and evaluation costs:
Once the legal right to explore has been acquired, exploration and evaluation expenditures are capitalized as incurred, unless future economic benefit is not expected to be realized. The Company capitalizes on a property by property basis, the costs of acquiring, maintaining its interest in, exploring and evaluating mineral properties until such time as the lease expires, it is, abandoned, sold or considered impaired in value. Indirect administrative costs are expensed as incurred. Exploration and evaluation properties are not depreciated during the exploration and evaluation stage.

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

Recovery of capitalized costs is dependent on successful development of economic mining operations or the disposition of the related mineral property.

Although the Company has taken steps to verify title to mineral properties in which it has an interest, these procedures do not guarantee the Company's title. Such properties may be subject to prior agreements or transfers, non-compliance with regulatory requirements or title may be affected by undetected defects.

4.4 Decommissioning and Restoration

The Company is subject to various governmental laws and regulations relating to the protection of the environment. The environmental regulations are continually changing and are generally becoming more restrictive.

Decommissioning and restoration obligations encompass legal, statutory, contractual or constructive obligations associated with the retirement of a long-lived tangible asset (for example, mine reclamation costs) that results from the acquisition, construction, development and/or normal operation of a long-lived asset. The retirement of a long-lived asset is reflected by an other-than-temporary removal from service, including sale of the asset, abandonment or disposal in some other manner.

The fair value of a liability for decommissioning and restoration is recorded in the period in which the obligation first arises. The Company records the estimated present value of future cash flows associated with site closure and reclamation as a long-term liability and increases the carrying value of the related assets for that amount. Over time, the liability is increased to reflect an interest element in the estimated future cash flows (accretion expense) considered in the initial measurement of fair value. The capitalized cost is depreciated on either the unit-of-production basis or the straight-line basis, as appropriate. The Company's estimates of its provision for decommissioning and restoration obligations could change as a result of changes in regulations, changes to the current market-based discount rate, the extent of environmental remediation required, and the means of reclamation or cost estimates. Changes in estimates are accounted for in the period in which these estimates are revised.

As at October 31, 2015, the Company has determined that it does not have any decommissioning and restoration obligations related to current or former operations.

4.5 Impairment of Non-Financial Assets

For the purposes of assessing impairment, the recoverable amount of an asset, which is the higher of its fair value less costs to sell and its value in use, is estimated.

4.6 Provisions

Liabilities are recognized when the Company has a present obligation (legal or constructive) that has arisen as a result of a past event and it is probable that a future outflow of resources will be required to settle the obligation, provided that a reliable

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

estimate can be made of the amount of the obligation. A provision is a liability of uncertain timing or amount.

Provisions are measured at the present value of the expenditures expected to be required to settle the obligation using a pre-tax rate that reflects the current market assessments of the time value of money and the risk specific to the obligation. The increase in the provision due to the passage of time is recognized as a financing expense.

4.7 Income Taxes

Tax expense recognized in profit or loss comprises the sum of deferred tax and current tax not recognized in other comprehensive income or directly in equity.

Current tax assets and liabilities comprise those obligations to, or claims from, fiscal authorities relating to the current or prior reporting periods, that are unpaid at the reporting date. Current tax is payable on taxable profit which differs from profit or loss in the financial statements. Calculation of current tax is based on tax rates and tax laws that have been enacted or substantively enacted by the end of the reporting period.

Deferred taxes are calculated using the liability method on temporary differences between the carrying amounts of assets and liabilities and their tax bases. Deferred tax is not provided on the initial recognition of goodwill or on the initial recognition of an asset or liability unless the related transaction is a business combination or affects taxable profit or accounting profit. Deferred tax liabilities on temporary differences associated with shares in subsidiaries and joint ventures is not provided for if reversal of these temporary differences can be controlled by the Company and it is probable that reversal will not occur in the foreseeable future.

Deferred tax assets and liabilities are measured using substantively enacted tax rates expected to apply to taxable income in the years in which those temporary differences are likely to reverse. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in profit or loss in the period that includes the substantive enactment date. Deferred tax assets are recognized for all temporary differences, carry-forward of unused tax credits and unused tax losses to the extent that it is probable that future taxable profits will be available against which they can be utilized.

Deferred tax assets and liabilities are calculated, without discounting, at tax rates that are expected to apply to their respective period of realization, provided they are enacted or substantively enacted by the end of the reporting period. Deferred tax assets are recognized to the extent that it is probable that they will be able to be utilized against future taxable income.

Deferred tax assets and liabilities are offset only when the Company has a right and intention to offset current tax assets and liabilities from the same taxation authority and the deferred tax assets and liabilities relate to income taxes levied by the same taxation authority on either the same entity or different entities which intend to settle current tax assets and liabilities on a net basis or simultaneously in each future period in which

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

significant amounts of deferred tax assets or liabilities are expected to be recovered or settled.

Changes in deferred tax assets or liabilities are recognized as a component of tax income or expense in profit or loss, except where they relate to items that are recognized in other comprehensive income or directly in equity, in which case the related deferred tax is also recognized in other comprehensive income or equity, respectively.

4.8 Flow-through Shares

Canadian tax legislation permits a company to issue flow-through shares whereby the deduction for tax purposes relating to qualified resource expenditures could be claimed by the investors rather than the company.

A flow-through common share comprises both the transfer of income tax deductions equal to the proceeds received on issue, and a common share with a deemed cost for tax purposes of nil. The issuer of these shares allocates the proceeds to their liability and equity components according to the respective fair values of each at the date of issuance, with the tax attribute considered a liability to the extent that a premium to market is obtained for the shares. Upon satisfaction of the spending requirements associated with the flow-through share agreements, a proportionate amount of the related flow-through liability recognized in previous periods in the statement of financial position will be reversed and the related deferred tax liability will be recognized. Any difference between the liability settled and the deferred tax liability recognized is accounted for as other income or income tax expense.

4.9 Share-based Payments

Share-based payment arrangements in which the Company receives goods or services as consideration for its own equity instruments are accounted for as equity-settled transactions and, when determinable, are recorded at the value of the goods and services received. If the value of the goods and services received are not determinable, then the fair value of the share-based payment is used.

The Company uses a fair value based method (Black-Scholes Option Pricing Model) for all share options granted to directors, employees and certain non-employees. For directors and employees, the fair value of the share options is measured at the date of grant. For grants to non-employees where the fair value of the goods or services is not determinable, the fair value of the share options is measured on the date the services are received.

The fair value of share-based payments is charged either to profit or loss or exploration and evaluation properties, with the offsetting credit to share option reserve. For directors, employees and consultants, the share options are recognized over the vesting period based on the best available estimate of the number of share options expected to vest. If options vest immediately, the expense is recognized when the options are issued. Estimates are subsequently revised if there is any indication that the number of share options expected to vest differs from previous estimates. Any cumulative adjustment prior to vesting is recognized in the current period. No adjustment is made to any expense recognized in

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

prior periods where vested. For non-employees, the share options are recognized over the related service period. When share options are exercised, the amounts previously recognized in share option reserve are transferred to share capital.

In the event share options are forfeited prior to vesting, the associated fair value recorded to date is reversed. The fair value of any vested share options that expire remain in share option reserve.

4.10 Related Party Transactions

Parties are considered to be related if one party has the ability, directly or indirectly, to control the other party or exercise significant influence over the other party in making financial and operating decisions. Parties are also considered to be related if they are subject to common control or common significant influence, related parties may be individuals or corporate entities. A transaction is considered to be a related party transaction when there is a transfer of resources or obligations between related parties. Related party transactions that are in the normal course of business and have commercial substance are measured at the exchange amount.

4.11 Earnings (Loss) per Share

Basic earnings (loss) per share are computed by dividing net earnings (loss) (the numerator) by the weighted average number of outstanding common shares for the period (denominator). In computing diluted earnings per share, an adjustment is made for the dilutive effect of outstanding share options, warrants and other convertible instruments.

In the periods when the Company reports a net loss, the effect of potential issuances of shares under share options and other convertible instruments is anti-dilutive. Therefore basic and diluted loss per share are the same. When diluted earnings per share is calculated, only those share options and other convertible instruments with exercise prices below the average trading price of the Company's common shares for the period will be dilutive.

During the period ended October 31, 2015 and 2014, all the outstanding share options and warrants were anti-dilutive.

4.12 Financial Instruments - Recognition and Measurements

Non-derivative financial assets and financial liabilities

The Company classifies financial assets as financial assets at fair value through profit or loss, held-to-maturity investments or loans and receivables. Available-for-sale financial assets are those financial assets that are not classified as any of the above. Financial liabilities are either classified as financial liabilities at fair value through profit or loss or as other financial liabilities.

Financial assets and financial liabilities are recognized initially at fair value.

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

Financial assets and financial liabilities at fair value through profit or loss are subsequently measured at fair value with changes in fair values recognized in profit or loss.

Financial assets classified as available for sale are subsequently measured at fair value with changes in fair value recognized in other comprehensive income.

Loans and receivables, held-to-maturity investments and other financial liabilities are subsequently measured at amortized cost using the effective interest method.

The Company's financial instruments consist of cash and cash equivalents, receivables, marketable securities, trade and other accounts payable.

Cash and cash equivalents are classified as fair value through profit or loss and receivables are classified as loans and receivables. Marketable securities are classified as available for sale. Trade and other accounts payable are classified as other financial liabilities.

Transaction costs, other than those related to financial instruments classified as financial assets and financial liabilities at fair value through profit or loss, are added to the fair value of the financial asset and financial liability on initial recognition.

4.13 Share Issuance Costs

Share issue costs, which include commissions, facilitation payments, professional fees and regulatory fees, are charged directly to share capital. Share issue costs incurred from the issuance of flow-through shares are charged directly to share capital and expense in proportion to the value of the Company's shares at time of issue and any flow-through share premium.

4.14 Comprehensive Income (loss)

Total comprehensive income comprises all components of profit or loss and other comprehensive income. Other comprehensive income includes changes in revaluation surplus, actuarial gains and losses on defined benefit plans, gains and losses from translating the financial statements of a foreign operation, gains and losses on re-measuring available-for-sale financial assets and the effective portion of gains and losses on hedging instruments in a cash flow hedge.

4.15 Changes in Accounting Standards

The Company has reviewed new and revised accounting pronouncements that have been issued but are not yet effective. The Company has not early adopted any of these standards and is currently evaluating the impact, if any, that these standards might have on its financial statements.

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

Accounting Standards Issued and Effective January 1, 2014 or Later

IFRS 9 Financial Instruments replaces the current standard *IAS 39 Financial Instruments: Recognition and Measurement*, replacing the current classification and measurement criteria for financial assets and liabilities with only two classification categories: amortized cost and fair value.

5. RECEIVABLES

The Company has amounts receivable from the Government of Canada due to statutory credits and refunds and has classified these receivables as non-financial assets.

As at October 31, 2015, cumulative METC rebates offset against deferred exploration and evaluation property costs are \$866,299 (January 31, 2015 - \$866,299).

The Company is required by the Government of British Columbia to incur a minimum amount of expenditures to maintain concessions. The minimum expenditure amount is based on the number of tenures and the age of cash concession. Expenditures in excess of the required annual minimum may be carried over to future years and, subject to certain conditions, to other mineral tenures located in B.C

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

8.1 Highland Valley Properties

8.1.1 Rateria

In 2004, the Company acquired an option, subsequently completed, to earn a 100% interest in the Rateria Property, comprised of 7 mineral claims located 10 kilometres south of the Highland Valley copper molybdenum concentrator near Logan Lake, British Columbia. To earn its interest the Company paid \$155,000 cash, issued 950,000 shares, and incurred \$500,000 in exploration expenditures prior to December 31, 2007. These claims are also subject to a 2.5% net smelter returns (“NSR”) royalty capped at \$3,000,000. The Company may at any time buy back 1% of the NSR for \$2,000,000. During the year ended January 31, 2009 the Company also purchased a 100% interest in four additional mineral claims for a total of \$25,750 cash. Two of the claims are subject to a 2.5% NSR, which the Company can purchase for \$3,000,000. Currently, the property is comprised of 39 claims totaling approximately 6,266 hectares.

8.1.2 West Valley

During the year ended January 31, 2009, the Company purchased for \$25,000 cash a 100% interest in a group of 43 mineral claims known as the West Valley Property, which lies to the west of the Rateria Properties. The Company subsequently purchased 9 additional contiguous claims for \$7,500. Currently, the property is comprised of 51 claims totaling approximately 9,569 hectares.

8.1.3 BX Property

On June 6th, 2011, the Company announced that it had negotiated an Option agreement with an arm’s length party to earn a 100% interest in the BX property, which is approximately 11.5 square kilometres in area and adjoins Teck’s Highland Valley Copper mine property. The Company was granted the exclusive right to acquire an undivided 100% interest in the BX property over a three year period by paying a total of \$130,000 in cash (\$20,000 paid to date), issuing a total of 500,000 in shares (50,000 issued to date) and incurring a total of \$400,000 in exploration expenditures. Upon vesting of the Company’s interest, the Optionor would hold a 2% NSR, and the Company would have the right to purchase 1% of the NSR by paying \$1,000,000 in cash to the Optionor. During the period of the option agreement the vendor allowed the related claims to lapse, resulting in a loss of the BX property. Accordingly, the Company wrote off all \$130,600 in costs that had been incurred on the property to January 31, 2012.

On April 2, 2012, the Company reached a settlement agreement whereby the vendor paid \$35,000, returned to the Company the common shares issued to date and transferred to the Company a 100% interest in certain B.C. mineral properties (refer to Note 8.3). The \$35,000 and the 50,000 shares (issued at an original value of \$10,500) were recovered in current income. The Company has elected to record no amount in respect to the mineral property interests received.

8.1.4 Abbott Lake Property

On May 30, 2012, the Company acquired an option to earn a 100% interest in the Abbott Lake Property, comprised of 8 mineral claims that adjoin the south side of the Company’s West Valley property. To earn its interest the Company must pay \$15,000 cash (paid) and issue, in aggregate, 350,000 shares (issued). These claims are also subject to a 0.5%

HAPPY CREEK MINERALS LTD.

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

NSR royalty. The Company completed the terms of the agreement in October, 2013 and has earned a 100% interest. Currently, the property is comprised of 8 claims totaling approximately 2,911 hectares.

8.1.5 Tyner Lake Property

On September 27, 2013, the Company acquired an option to earn a 100% interest in the Tyner Lake Property, comprised of 18 mineral claims totaling 2,250 hectares. To earn its interest the Company must pay \$30,000 cash (\$10,000 paid) and issue 500,000 shares (250,000 issued). The balance of the cash and share payments must be made within one year of the anniversary date. These claims are also subject to a 2% NSR royalty.

The Company and the Optionor amended the original agreement in February 2014. To earn its 100% interest, the Company paid \$25,000 cash and issued 250,000 shares.

8.2 Cariboo District

In 2005, the Company acquired from three individuals, including two directors of the Company, a 100% interest in five mineral properties located in the Cariboo Region, approximately 80 kilometres northeast of 100 Mile House, British Columbia. To acquire its interest the Company issued 5,000,000 common shares and paid \$25,000 to the optionors, and spent \$160,000 on exploration. The acquisition is subject to a 2.5% NSR, of which 1% can be bought back by the Company for \$2,000,000.

The Property is comprised of 5 groups of claims known as the Silverboss (31 claims totaling 8,088 hectares), Fox (38 claims totaling 16,651 hectares), Hen, Art-DL (13 Hen and Art-DL claims totaling 6,704 hectares) and Hawk (22 claims totaling 1,897 hectares) claim groups.

8.2.1 Gus Property

In 2007, the Company entered into an option agreement to earn a 100% interest in the Gus Property, located in the Cariboo Region approximately 80 kilometres northeast of 100 Mile House, British Columbia. During the year ended January 31, 2011, the Company issued an additional 100,000 shares to the optionor for a total of 300,000 shares to date and made additional cash payments of \$20,000 for a total of \$50,000 cash paid to date. This completes all necessary obligations under the agreement. The Company now holds a 100% interest in the claims subject to a 1.5% NSR, which the Company can buy back at any time for \$1,500,000. Currently, this property is comprised of 3 claims totaling approximately 913 hectares.

8.2.2 Grey Property

In 2007, the Company entered into an option agreement to earn a 100% interest in the Grey Property, located in the Clinton Mining Division, British Columbia. To acquire its interest, the Company agreed to issue 300,000 common shares and pay \$100,000 to the optionors over a five year period. During the year ended January 31, 2011, the Company completed all obligations under this agreement and acquired a 100% in the property by issuing an additional 150,000 common shares and paying \$60,000 in cash. The claims are subject to a 2% NSR, of which 1% can be bought out by the Company for \$1,000,000. Currently, this property is comprised of 3 claims totaling approximately 599 hectares.

(Expressed in Canadian Dollars)

8.2.3 Eye claim option

On July 20th 2011, the Company announced it had granted an Option to Newmont Mining Corporation (Newmont) to acquire the Company's Eye mineral claim in south central British Columbia, Canada. To earn a 100% interest in the Eye property, Newmont must pay the Company a total of \$368,000 in cash and perform \$280,000 in exploration in stages over a five year period. If Newmont elects to purchase the property it will grant to the Company an NSR of 0.5%, subject to a cap of \$1.5 million. In addition, Newmont was to assume the underlying royalty obligations to the previous owner of the property. In June 2013, Newmont dropped its option on the Eye property. Currently, the Company retains this claim, totaling 119 hectares.

8.3 Revelstoke District Properties

As part of the settlement with the vendor of the BX property (refer to Note 8.1.3), the Company received 100% interest in 17 claims known as the Silver Dollar Property, located in the Revelstoke Mining District of British Columbia. Currently, the property is comprised of 16 claims totaling approximately 2,098 hectares.

During the year ended January 31, 2013 the Company acquired from unrelated parties a 100% interest in 18 additional contiguous mineral claims in consideration for \$10,150 cash. Currently, the property is comprised of 16 claims totaling approximately 1,696 hectares.

During the nine months ended October 31, 2015 the Company acquired from an unrelated party a 100% interest in a new tenure for \$5,000 cash. This tenure comprises approximately 20.41 hectares.

9. TRADE AND OTHER ACCOUNTS PAYABLE

	October 31, 2015	January 31, 2015
Financial Liabilities		
Trade payables	\$ 63,384	\$ 17,006
Payroll accruals	8,633	10,197
Accrued liabilities	26,984	22,500
	<u>\$ 99,001</u>	<u>\$ 49,703</u>

All amounts are short term. The carrying value of trade payables, payroll accruals and accrued liabilities is considered a reasonable approximation of fair value.

10.2 Shares Issued

Shares issued and outstanding as at October 31, 2015 are 73,137,631 (January 31, 2015 – 61,047,630).

During the nine months ended October 31, 2015, the following share transactions occurred:

- i. On September 4, 2015, the Company completed a non-brokered private placement, issuing a total of 10,000,000 units of the Company at a subscription price of \$0.11 per unit for gross proceeds of \$1,100,000. Each unit consists of one common share of the Company and one-half of one share purchase warrant exercisable into a common share of the Company at a price of \$0.15 for three years after closing of the private placement.
- ii. On May 22, 2015, the Company completed a non-flow-through private placement, issuing a total of 1,090,000 units of the Company at a subscription price of \$0.15 per unit for gross proceeds of \$163,500. Each unit consists of one common share of the Company and one-half of one share purchase warrant exercisable into a common share of the Company at a price of \$0.20 for three years after closing of the private placement.

During the year ended January 31, 2015, the following share transactions occurred:

- iii. On May 21, 2014, the Company completed a non-flow-through private placement, issuing a total of 3,336,001 units of the Company at a subscription price of \$0.15 per unit for gross proceeds of \$500,400. Each unit consists of one common share of the Company and one-half of one share purchase warrant exercisable into a common share of the Company at a price of \$0.20 for one year after closing of the private placement. The Company paid a cash finder's fee of \$5,250 pursuant to this private placement.

10.3 Warrants

Of these warrants 1,668,000 expire on May 21, 2016 and are exercisable at \$0.20 per warrant, 545,000 expire on May 22, 2018 and are exercisable at \$0.20 per warrant and 5,000,000 expire on September 4, 2018 and are exercisable at \$0.15 per warrant.

10.4 Share-based compensation

The Company has adopted an incentive share option plan for the benefit of directors, officers and employees, which options to acquire up to 10% of the issued share capital, at the award date, may be granted to eligible optionees from time to time. Additional shares have also been issued to consultants of the Company, as part of their compensation arrangement. Share options granted have a term of between one and five years, vest immediately or over time and have an exercise price determined by the directors. The Company's policy is that the exercise price may not be less than the closing quoted price of the Company's common shares traded through the facilities of the exchange on which the Company's common shares are listed.

Total share options granted during the year ended January 31, 2015 were 2,925,000 (year ended January 31, 2014 – 950,000). Total share-based payments recognized for the fair value of share options granted, vested and approved by the shareholders during the year ended January 31, 2015 was \$69,194 (year ended January 31, 2014 - \$41,506). There were 500,000 share options granted during the nine months ended October 31, 2015 with a recognized fair value of \$46,766.

The fair value of the share options granted during the nine months ended October 31, 2015 and the year ended January 31, 2015 was estimated on the date of grant using the Black-Scholes Option Pricing Model with the following weighted average assumptions:

	Nine months ended October 31, 2015	Year ended January 31, 2015
Strike price	\$0.18	\$0.18
Risk-free interest rate	1.10%	1.06-1.11%
Expected option life	3	2.83-3
Expected stock price volatility	80%	70.79-80.48%
Dividend payment during life of option	Nil	Nil
Expected forfeiture rate	Nil	Nil

Option pricing models require the input of highly speculative assumptions, including the expected future price volatility of a company's shares. Expected volatility has been estimated based on historical volatility. Changes in these assumptions can materially affect the fair value estimate and, therefore, existing models do not necessarily provide a reliable single measure of the fair value of the Company's share options.

The following stock options issued under the employee stock option plan were outstanding

12. MANAGEMENT OF CAPITAL

The Company defines capital that it manages as its cash and cash equivalent and share capital.

The Company's objective when managing capital is to maintain corporate and administrative functions necessary to support the Company's operations and corporate functions; to perform mineral exploration activities on the Company's exploration projects; and to seek out and acquire new projects of merit.

The Company manages its capital structure in a manner that provides sufficient funding for operational and capital expenditure activities. Funds are secured, when necessary, through debt funding or equity capital raised by means of private placements. There can be no assurances that the Company will be able to obtain debt or equity capital in the case of working capital deficits.

The Company does not pay dividends and has no long-term debt or bank credit facility. The Company is not subject to any externally imposed capital requirements.

There have not been any changes to the Company's capital management policy during the period.

13. RISK MANAGEMENT

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

For the Nine months ended October 31, 2015 and 2014

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

13.1 Financial Risk Management

The Company may be exposed to risks of varying degrees of significance which could affect its ability to achieve its strategic objectives. The main objectives of the Company's risk management processes are to ensure that risks are properly identified and that the capital base is adequate in relation to those risks. The principal risks to which the Company is exposed are described below.

a. Capital Risk

The Company manages its capital to ensure that there are adequate capital resources for the Company to maintain title to and explore its mineral properties. The capital structure of the Company consists of cash and share capital.

b. Credit Risk

Credit risk is the risk that a client or vendor will be unable to pay or receive any amounts owed to or owing by the Company. Management's assessment of the Company's exposure to credit risk is low despite the fact that substantially all of the Company's amounts receivable are concentrated with the Government of Canada for the reimbursement of goods and services tax input tax credits and with the Government of British Columbia for British Columbia Mineral Exploration Tax Credits receivable.

c. Liquidity Risk

Liquidity risk is the risk that the Company is not able to meet its financial obligations as they fall due. As at October 31, 2015, the Company has a working capital surplus of \$739,705, and it does not have any long term monetary liabilities. The Company may seek additional financing through debt or equity offerings, but there can be no assurance that such financing will be available on terms acceptable to the Company or at all. Any equity offering will result in dilution to the ownership interests of the Company's shareholders and may result in dilution to the value of such interests. The Company's approach to managing liquidity risk is to ensure that it will have sufficient liquidity to meet liabilities when due. As at October 31, 2015, the Company had a cash and cash equivalents of \$807,571 to settle current liabilities of \$99,001. The Company's financial liabilities have contractual maturities of 30 days or due on demand and are subject to normal trade terms.

d. Market Risk

Market risk incorporates a range of risks. Movements in risk factors, such as market price risk and currency risk, affect the fair values of financial assets and liabilities. The Company is exposed to these risks as the ability of the Company to develop or market its properties and the future profitability of the Company is related to the market price of certain minerals such as copper, molybdenum, tungsten, gold and silver.

13.2 Fair Values

The carrying values of cash and cash equivalents, goods and service taxes receivable, mineral exploration tax credits receivable, marketable securities and trade and other

HAPPY CREEK MINERALS LTD.

Notes to the Financial Statements

(Unaudited – Prepared by Management)

(Expressed in Canadian Dollars)

accounts payable approximate fair values due to their short-term to maturity nature or the ability to readily convert to cash.

Assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. As at October 31, 2015 the fair value of the Company's financial instruments approximate their carrying value due to their short term nature. All financial instruments are all classified as Level 1 items.

Level 1 – Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities.

Level 2 – Quoted prices in markets that are not active, or inputs that are observable, either directly or indirectly, for substantially the full term of the asset or liability.

Level 3 – Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (supported by little or no market activity).

14. COMMITMENTS

14.1 Lease Commitment

The Company has an operating lease for office premises that has a two-year term, expiring on November 30, 2016. The monthly lease payments include rent, operating costs and property taxes. The minimum payments for the remaining periods are as follows:

Fiscal Year	Amount
2016	\$ 7,167
2017	24,055
	<u>\$ 31,222</u>

14.2 Termination of Service Agreements

The Company has a management and administrative services agreement with its President and CEO. In the event that the Company terminates this agreement without cause, it must make a lump sum payment of \$120,000, based on his current salary, to the President and CEO.

The Company has a professional services agreement with its CFO. In the event that the Company terminates this agreement, it must make a final payment of \$5,000 to the CFO.

15. SUBSEQUENT EVENTS

The following events occurred subsequent to October 31, 2015:

- 250,000 share purchase options exercisable at \$0.23 expired unexercised.

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

Overview

This Management's Discussion and Analysis ("MD&A") provides relevant information on the operations and financial condition of Happy Creek Minerals Ltd. ("Happy Creek" or the "Company") for periods ended October 31, 2015 and 2014. This MD&A has been prepared by management as of December 22, 2015 and includes information up to that date.

The MD&A supplements, but does not form part of, the interim financial statements of the Company for the period ended October 31, 2015 and 2014. The following MD&A should be read in conjunction with the interim financial statements and related notes of the Company for the nine months ended October 31, 2015 and the Company's audited financial statements for the years ended January 31, 2015 and 2014. The financial statements and the notes therein have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB"). All monetary amounts in this MD&A and in the financial statements are expressed in Canadian dollars unless otherwise stated. Additional information may be found on SEDAR at www.sedar.com, and www.happycreekminerals.com.

The MD&A may contain statements that are forward-looking in nature, involving known and unknown risks and uncertainties such as general economic and business conditions, operating costs, changes in foreign currency, exchange rates and other factors. Since forward-looking statements address future events and conditions, by their nature, they involve inherent risks and uncertainties. Actual results may be materially different from those expressed or implied in such statements. The Company assumes no obligation to update or revise any forward-looking statement whether as a result of new information, future events, or any other reason except as required by law.

The MD&A may contain "forward-looking information" within the meaning of applicable securities laws, including statements that address capital costs, recovery, grade, and timing of work or plans at the Company's mineral projects. Forward-looking information may be, but not always, identified by the use of words such as "seek", "anticipate", "plan", "planned", "continue", "expect", "thought to", "project", "predict", "potential", "targeting", "intends", "believe", "opportunity", "further" and others, or which describes a goal or action, event or result such as "may", "should", "could", "would", "might" or "will" be undertaken, occur or achieved. Statements also include those that address future mineral production, reserve potential, potential size or scale of a mineralized zone, potential expansion of mineralization, potential type(s) of mining, potential grades as well as to Happy creek's ability to fund ongoing expenditure, or assumptions about future metal or mineral prices, currency exchange rates, metallurgical recoveries and grades, favourable operating conditions, access, political stability, obtaining or renewal of existing or required mineral titles, licenses and permits, labour stability, market conditions, availability of equipment, accuracy of any mineral resources, anticipated costs and expenditures. Assumptions may be based on factors and events that are not within the control of Happy creek and there is no assurance they will prove to be correct. Such forward-looking information involves known and unknown risks, which may cause the actual results to materially differ, and/or any future

results expressed or implied by such forward-looking information. Additional information on risks and uncertainties can be found within Financial Statements, Prospectus and other materials found on the Company's SEDAR profile at www.sedar.com. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking information, there can be no assurance that such information will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements. The Company withholds any obligation to update or revise any forward-looking information, whether as a result of new information, future events or otherwise, unless required by law.

Overall Performance

Happy Creek Minerals Ltd. (the "Company") is engaged in the business of acquisition and exploration of mineral properties in British Columbia, Canada. The company's focus is to explore for and locate economic mineral deposits in areas that are in proximity to existing and past producing mines and existing resource-based infrastructure. The Company's objective is to partner or sell such deposits to a larger mining company for development and production, or under certain conditions to carry the project to production.

The Company owns a 100% interest in 9 properties located in British Columbia, Canada. The Company acquired these properties at an early stage, mainly between 2005 and 2009, and initially performed systematic surface exploration to identify quality targets for drill testing. Important exploration drilling success was achieved on the Rateria and Fox properties, with new discoveries now at the advanced exploration and resource definition stage:

1. Fox property: A new discovery of tungsten in a mineral system that is overall 10 km by 3 km in dimension. Five prospect areas contain tungsten grade and thickness in surface, trench and drill core samples that are comparable or exceed those which occur in other mines and advanced stage projects elsewhere in the western world. The large scale, near-surface setting, high grade and proximity to infrastructure are positive attributes of this project, and it is believed to be a rare and exceptional tungsten find. The Fox is thought to be a candidate for potential production and Company is exploring its total resource potential while performing various studies on one deposit with plans to prepare a preliminary economic assessment.
2. Rateria and West Valley property: Two newly discovered copper zones, starting at bedrock surface, are partially defined and still open in extent. Located approximately 6.5 km from a producing open pit at Teck's Highland Valley Copper mine (HVC), drill results have returned grades similar to those currently being mined at HVC. Zone 1 is approximately 1.2 km in length, 50 to 200 m in width, and at least 400 m in depth, and is still open in extent. Zone 2 is currently 450 m long, up to 150 m wide and 300 m in depth and also remains open in extent. Metallurgy of Zone 1 shows excellent recovery and concentrate grades and in addition, due to the type of copper mineral present, it is also potentially leachable. The Company is the first in the area to announce rhenium (Re) in drill results, with concentrations of Re in molybdenite that show strong enrichment. Zone 1 and 2 are at the resource definition stage, and the Company has

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

also identified several other prospective copper targets on the Rateria and West Valley properties;

The Company has advanced and assessed several other early-stage properties to the point where well-defined, quality targets are ready for drill testing:

1. Silverboss property: Surface rock and soil sampling, geology and geophysics have identified several bulk-tonnage copper, molybdenum and gold targets adjacent to the former Boss Mountain molybdenum mine (Glencore-Xstrata/NMC Resource Corp.);
2. Silver Dollar property: Covering a 12 km long segment of the historical Camborne mining camp located east of Trout Lake and southeast of Revelstoke, B.C, it includes several historical past producing high grade gold, silver, lead and zinc prospects.
3. Hawk property: Geochemistry, geology, geophysics, trenching and limited drilling has outlined several bulk tonnage copper-gold (alkalic porphyry) targets. These are typical of others within the Quesnel Trough a geological formation which contains most of B.C.'s copper-gold mines and deposits.
4. Hen-Art-DL property: Prospecting, rock and soil sampling, trenching and reconnaissance drilling has identified several new gold skarn and sediment-hosted gold-silver prospects.

Exploration updates

The following is an overview of the Company's properties with results from the most recent years' work completed. Please refer to the Project Overview section herein, Company's website, news releases and filings on SEDAR for additional details, maps, photos and other information.

Fox Tungsten Property

On January 26, 2015, the Company announced analytical results from the northwestern side of Deception Mountain including 0.80% W_3 in grab samples over 30 m, and 800m to the southwest, 0.40% W_3 in a grab sample. At the east end of the Nightcrawler zone, samples returned an average 1.97% W_3 , 0.14% zinc and 0.20 g/t gold in a sub-crop boulder, 0.40 metres in width. On July 29th 2015, the Company announced it has begun geological work on the Fox property, and on September 17th 2015, announced surface sampling at the Creek prospect returned values of 1.19 to 5.99% W_3 in grab samples and that a drill program has started. On October 29, 2015, the Company announced drill results including 5.0 metres of 1.0% W_3 from the Creek prospect, and that an airborne geophysical survey, MSc. Geology theses, prospecting, geological mapping, soil geochemical survey and bulk rock sampling for metallurgical test work was completed on the property. On November 23, 2015, the Company announced additional drill results including 6.5 metres of 0.21% W_3 and that the widely spaced drill holes have extended the Nightcrawler zone by 500 metres. In addition, the soil geochemical survey has outlined a strongly positive target approximately 1.25 km by 500 metres in dimension at the South Grid. The South Grid area is located at higher elevations to the south of the

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

Nightcrawler zone, and accessed by recent logging roads and clear cuts. This is thought to be a high priority exploration target for trenching and drilling in 2016.

Results of metallurgical testing, deposit modelling/resource study for one of the 5 known zones, and other geological work from Deception Mountain are pending.

Highland Valley Property

On February 19, 2015, the Company announced results from metallurgical tests from Zone 2, which shows metallurgy that is compatible with Zone 1, allowing future resources to be combined. In addition, results show rhenium occurs within molybdenite in a ratio approximately 4 kg Re/tonne molybdenite concentrate, and gold is present with copper with concentrates having 36.2% copper, 7.49 g/t gold and 189 g/t silver. On July 9th 2015, the Company announced it had located data from several historical drill holes from the property and together with surface prospecting and geophysical survey data, the work has led to identifying several quality targets with potential to contain large copper deposits.

Silverboss Property

On October 21, 2014, the Company announced that airborne geophysical targets situated south of the Boss mountain moly mine were investigated on the ground. Recent logging activity provided good access and that the area is completely covered by glacial till, precluding observation of bedrock. Boulders that are likely transported to some extent by glaciers up to returned 0.52% copper, 0.20 g/t gold in the vicinity of the airborne geophysical target and this area is thought to hold good potential for bulk tonnage copper-gold deposits that could be revealed with induced polarization geophysics and drill testing.

Silver Dollar Property

On June 11th, 2015, the company announced the acquisition of a 100% interest in two new mineral claims, including the historical Goldfinch mine, located inside the Silver Dollar claims at the north end of the property. These claims cover former underground workings in which bulk sampling and drilling of zones returned positive and locally high gold grades. The historical results include drilling of 41.2 metres containing 2.56 g/t gold from surface, with a higher grade interval of 3.4 metres with 25.34 g/t gold. Underground chip sampling returned trace to 330.0 g/t gold. The property is thought to host bulk-tonnage open-pit potential as well as high gold values in veins.

Results from a geochemical survey performed on the Goldfinch claim in 2015 are pending.

Project Overview

Highland Valley District- Rateria and West Valley properties

The Company's Highland Valley property adjoins and surrounds the southern end of Teck's Highland Valley Copper Mine property (HVC). The HVC mine is one of Canada's largest copper producers

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

utilizing three separate open pits to feed over 130,000 tonnes per day to the concentrator. Forecast grades of reserves and resources range from 0.20% to 0.34% copper. The nature of Highland Valley deposit geology and the efficiency of operations allow globally competitive production cost. There are geological similarities between HVC and the Company's properties. On the Rateria property the Company has completed modern three-dimensional induced polarization and magnetic geophysical surveys, geology, geochemical surveys and diamond drilling. Zone 1 was first identified in 2006 with drill holes intersecting the interpreted edge of a mineralized zone. Follow-up drilling carried out between 2007 and 2011 outlined positive copper grades starting at surface and the zone is now approximately 1.2 km in length, 50 to 200 m in width and over 400 metres in depth. Zone 1 remains open in extent.

Zone 1 Highlights		
Hole	Interval (m)	Cu %
R07-9	100.0	0.29
R10-11	152.1	0.24
R10-12	253.7	0.24
R10-13	145.3	0.25
R11-1	95.0	0.67
R11-6	100.0	0.35
R11-8	250.0	0.25
R11-8	162.5	0.32
R11-11	242.5	0.25
includes	102.5	0.43
R11-13	47.5	0.42
R11-28	307.8	0.10

Several hundred metres to the west of Zone 1, drilling returned 7.5 m of 1.35% copper, 12.4 g/t silver, and 7.5 m of 1.7% copper, 30.7 g/t silver and 7.5 m of 0.60% copper, 3.5 g/t silver. These holes partially outline a new copper zone over a distance of 600 metres that remains undefined and open in extent. It is interpreted to be the southern extension to Teck's Yubet prospect and part of the adjacent Zone 1 mineral system. The Company performed metallurgical testing of Zone 1 which returned a concentrate grading 40.0 % copper and 398 g/t silver which indicates the material is readily recoverable using standard flotation methods into a quality, high grade concentrate.

In 2008, drilling discovered a second zone (Zone 2).

Zone 2 Highlights						
	Interval (m)	Cu %	Mo %	Au (g/t)	Ag (g/t)	Re (g/t)
R08-01	113.0	0.33	0.002	0.05	1.5	N/A
R08-05	126.0	0.46	0.008	0.10	1.7	N/A
R09-06	38.2	0.11	0.029	0.03	1.2	2.14
R09-07	48.0	0.30	0.002	0.07	1.6	0.26

HAPPY CREEK MINERALS LTD.

R12-02	152.5	0.35	0.004	0.06	1.7	0.57

In Zone 2, drilling has returned continuous, positive drill results in an area approximately 450 m in length, 50-100 m in width and to a depth of 300 m; however, more widely spaced drilling suggests the mineral system is over one km by 500 m in size, and remains undefined and open in extent in several directions.

West Valley

From its acquisition between 2008 and 2011, the Company completed property-wide reconnaissance stream sediment sampling and prospecting, geological mapping and a limited induced polarization and diamond drilling program of three holes at the NTP prospect. These drill holes returned approximately 300 ppm copper from the top to end of the holes and are thought to indicate proximity to a large mineralized system. The geology also suggests that younger phases of the Guichon batholith underlie the area which are associated with other deposits in the district and supports potential for new deposits to be found. The Lornex fault extends southward from the giant Valley and Lornex deposits and within and adjacent the West Valley property; it is an important structure that forms part of the giant Lornex and Valley deposits to the north. On October 8, 2013, the Company announced it has acquired an additional 18 mineral claims totaling 22.5 square kilometres. During 2014 and early 2015, geological work was conducted on the West Valley property in particular around the Fir prospect.

Both Zone 1 and 2 are new copper deposit discoveries for which clear resource potential exists and are 6.5 km from a currently-producing open pit (the adjacent HVC mine). Other prospects on the Rateria and West Valley properties contain positive copper values in stream sediment, soil and rock, and positive geophysical and geological data to support the potential for additional porphyry copper deposits. The Company's Highland Valley properties have attracted interest from a number of companies for potential investment or JV, and a number of property tours were conducted.

Cariboo Property

Fox

The Fox tungsten-moly property has been explored by the Company since 2005, starting at a very early stage. Surface sampling identified an area approximately 10 by 3 kilometres, including the Nightcrawler and Deception Mountain areas, where promising tungsten and molybdenum values occur. Very few deposits worldwide that are at surface have grades over 0.7% WO₃. On the Fox property, there are positive to potentially economic values of tungsten located in two main areas: the Nightcrawler and Deception Mountain.

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

The Nightcrawler–Discovery Zone results include 5.0 m of 0.33% W_3 in 07F-03, 2.0 m of 0.74% W_3 , 3.0 m of 0.34% W_3 and 2.0 m of 0.48% W_3 in 07F-05, 0.90 m of 1.37% W_3 , 2.5 m of 0.33% W_3 , and 9.2 m of 0.16% W_3 , including 2.2 m of 0.39% W_3 in F10-1. F15-01 returned 5.0 metres of 1.0% W_3 .

Multiple layers of tungsten mineralization at the Nightcrawler-Discovery zone have been intersected by widely spaced drilling over an area approximately 1.5 km by 500 m. The best grade-width in the drill holes occurs to the east, where the mineralized zones remain open in extent.

On the east side of Deception Mountain, four outcropping mineralized zones occur over 3 km: from south to north, they are called the 708, BN, RC (Ridley Creek), and BK prospects. During 2010, hand trenching at three zones returned 7.0 m of 0.80% W_3 , 4.9 m of 1.07% W_3 , 2.0 m of 5.0% W_3 , 7.3 m of 1.25% W_3 , and 0.4 m of 11.10% W_3 , respectively.

Between 2011 and 2013, drill programs on Deception Mountain discovered and outlined a well mineralized zone at the RC prospect that remains open in extent. Approximately one kilometre to the north and south of the RC prospect, positive results were also obtained from the BK and BN zones. At the BN, F12-27 returned three separate intervals; 4.1 m of 1.78% W_3 , 14.8 m of 4.0% W_3 , and 24.0 m of 0.79% W_3 . This hole is believed to be one of the best tungsten drill results worldwide from a recent new discovery. Due to the gentle dip of the mineralized zones, the true thicknesses are estimated to be approximately 90-95% of the reported intersection intervals.

Highlights of drill results from the RC and BN Zones

Hole	From	Width	% W_3
F11-02	5.70	5.15	0.91
F11-07	14.30	4.70	1.03
F11-08	8.25	12.40	0.74
F12-01	14.00	19.40	0.82
F12-09	15.00	11.00	0.80
F12-11	27.00	14.00	0.66
F12-17	20.00	20.00	0.63
F12-18	18.00	24.70	0.68
F12-27	1.90	4.10	1.78
F12-27	83.20	14.80	4.04
F12-27	136.00	24.00	0.79
F13-01	20.00	9.50	0.60
F13-03	20.00	22.00	0.76
F13-08	12.00	14.82	0.59
F13-09	31.65	17.35	0.50

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

F13-19	31.75	26.25	1.19
--------	-------	--------------	-------------

These results compare favourably with other tungsten projects globally: the results are highly encouraging and are among the highest in grade and are generally close to surface. In addition, there are encouraging zinc, bismuth, indium, gold and silver values that may make potential by-products.

On December 11th 2013, the Company announced results of preliminary metallurgical test work performed on an 800 kg surface sample. First-pass gravity circuit scouter tests recovered 59.3% of the tungsten into a scheelite concentrate that graded 43.3% WO₃ and a final concentrate grade of 70% WO₃ was achieved from the coarse cleaner concentrate: this grade of concentrate exceeds published commercial scheelite tungsten concentrate grades. In addition, a primary zinc cleaner concentrate graded 18.4% zinc, 4.04 g/t gold, 156 g/t silver and 66 g/t indium while recovering 68.9% of the zinc. This preliminary work was very encouraging, and further optimization and locked-cycle test work can be expected to lead to improved metallurgical performance.

On September 17th, 2014, the Company announced it had performed geological work on the Fox property. On the northwest side of Deception Mountain, favorable calc silicate and skarn zones were located in several areas with analytical results including an average 0.80% WO₃ in grab samples over 30 m, and 800 m southwest, 0.40% WO₃. The interpretation of the geology suggests the zones of favorable calc silicate, skarn and tungsten occurring at the BN, RC, and BK on the east side of the mountain continue through the mountain to the other side, a distance of approximately 1.4 km.

During 2015, the Company completed an airborne geophysical survey, prospecting, geological mapping, drilling of eight holes totalling 1,500 metres at the Nightcrawler zone, a soil geochemical survey, and hand trench sampling of the RC zone for further metallurgical test work. Results include drill hole F15-02 with 5.0 metres of 1.0% WO₃, and a large scale soil geochemical target identified at the South Grid approximately 1.25 km by 500 metres in dimension. Metallurgical and other studies are underway and further results are pending.

On the Fox tungsten property, results indicate the presence of a large scale, strongly mineralized system, and drilling has confirmed the presence of zones with potentially economic grades and thickness that are thought to be comparable to the highest grade tungsten mines in the world.

Black Riders

Located to the southeast of the Fox, the Black Riders property is underlain by a large magnesium-rich ultramafic complex containing nickel and chrome values in outcrops in an area approximately one km by three km. On June 10th 2014, the Company announced results of petrographic work from several samples. The samples were found to contain, in part, nickel occurring as iron-nickel alloy and awaruite. These minerals are of interest for their amenability to be concentrated by magnetic and gravimetric methods, unlike traditional nickel sulphide deposits. The preliminary results are encouraging and further sampling and testing for the abundance of nickel-iron alloy minerals is planned.

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

Silverboss

The Silverboss property surrounds the former Boss Mountain molybdenum mine, currently owned by Xstrata/Glencore and under Option to NMC Resource Corp. The Boss Mountain molybdenum mine was Canada's first significant "primary" producer of molybdenum and having past production averaging around 0.200% Mo. Exploration by Happy Creek has identified large scale and positive soil and rock geochemical anomalies of copper, molybdenum and gold extending outward from the known mineralized zones and well onto the Silverboss property. The Horse Trail zone contains numerous mineralized rock samples ranging from 0.10 to 1.69% copper, 0.108 to 0.637% molybdenum and 1.03 to 10.0 g/t gold. The Dogtooth and East Breccia zones have returned values of 0.10 to 5.0 g/t gold and up to 53.01 g/t gold, 343.0 g/t silver in grab samples and 9.29 g/t gold, 27.3 g/t silver over 1.17 metres in width. These veins are located within a positive soil geochemical anomaly that is approximately 1.6 by 1.2 km in size. The historical Silverboss shaft zone consists of a shear and quartz vein system, 1.0 to 3.0 metres in width that has been traced on surface for 350 metres. Samples from this zone contain 9.25 g/t gold, 514.8 g/t silver over 0.25 metres and 2.52% copper, 6.21 g/t gold, 295 g/t silver and 6.76 g/t indium in grab samples. Further north, the Company has also identified another area (Gus) where positive copper values occur in soil in an area of approximately 2 km by 1 km.

On April 3, 2013, the Company announced completion of a three-dimensional induced polarization (3D IP) and magnetic geophysical survey over the Silverboss Shaft and Horse Trail prospects. At the Silverboss Shaft prospect, the 3DIP survey has produced a clear and positive response of 9 to over 13 milliseconds chargeability that extends to over 250 m below surface. This positive response extends north and eastward, forming another zone approximately 350 m by 400 m that remains open in extent. At the Horse Trail zone, the 3D IP survey has returned a moderate to very strong response that extends westward from the open pits of the past-producing Boss Mountain mine. The geophysical results combined with the positive surface samples and geology located adjacent a significant past-producer are thought to represent a quality bulk tonnage exploration target that is ready for drill testing.

On December 8th, 2014, the Company announced results from a geological investigation to the south of the Boss Mountain mine, where an airborne geophysical survey and some previous soil samples returned encouraging results. The target area is completely covered by overburden or glacial till, however large boulders located in the area contain from trace to 0.52% copper and 0.20 g/t gold, and support the potential for underlying bulk tonnage style porphyry copper-gold mineralization. Further work is recommended to include a geophysical survey and drill testing.

Hawk

The Hawk property is located within the Quesnel Trough where the geology is known to host alkalic style copper-gold-silver deposits and mines within central B.C. Exploration on the Hawk property has returned surface samples containing positive copper, gold and silver values in an area approximately 3.5 kilometres by 1.5 kilometres in dimension. Chip sampling at the Main zone returned 0.88% copper and 1.07 g/t gold across 5.0 metres and boulders nearby contain up to 4.5% copper and 18.0 g/t gold. Historical, very short drill holes approximately 100 metres north of the Main zone returned 3.0 metres

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

grading 0.79% copper, 1.73 g/t gold, 9.43g/t silver and 1.83 metres containing 0.93% copper, 3.1 g/t gold and 12.34 g/t silver.

In 2007, and several hundred metres east and southeast of these samples, reconnaissance drilling returned 9.1 metres of 0.093% copper and 0.134 g/t gold in the first few samples at the top of 07H-02. As the mineralization occurs right at the top of the angled hole, it is thought the hole may have only cut the edge of a mineralized zone and it remains open in extent behind the hole.

During the year ended January 31, 2010, The Company optioned the Hawk property to Jiulian Resources Inc. who focused on additional geological mapping, outcrop sampling and soil geochemical confirmation. During the period ending July 31, 2010, Jiulian completed two drill holes totaling 995 metres that targeted the centre of a large induced polarization geophysical anomaly. Details on this work can be found in Jiulian Resources news release dated June 21, 2010, respectively. In summary, the drill holes intersected long intervals containing abundant pyrite (up to 10%), and trace up to 0.10% copper and 0.20 g/t gold and much of the core remains un-sampled. It is interpreted that these holes intersected the margins of a porphyry copper system at some distance from the Main zone described above.

Additional prospecting and rock sampling were conducted during 2011. On March 1, 2012, the Company announced that surface rock sample results include 1.64% copper, 3.0 g/t gold, 18.3 g/t silver, 0.007 g/t palladium and 0.007 g/t platinum. One of the samples returned 0.767% copper, 1.18 g/t gold, 4.08 g/t silver, 0.024 g/t palladium, and 0.189 g/t platinum. These are the first samples on the property analyzed for platinum and palladium and results indicate these precious metals are present and in part support an alkaline porphyry copper-gold model.

On October 11, 2012, the Company announced results of machine trenching conducted during 2012. Selected sample assays include 4.55% copper, 12.8 g/t gold and 52.3 g/t silver; 1.93 per cent copper, 10.5 grams per tonne gold and 18.6 grams per tonne silver; and 0.43 per cent copper, 1.61 g/t gold and 3.4 g/t silver. At the Main zone trenching confirmed previous chip sampling and returned 0.76% copper, 2.09 g/t gold, 8.64 g/t silver over 5.0 metres.

The Hawk property contains a large scale alkaline type copper-gold system, similar to others in the Quesnel Trough, and has a number of targets thought to be ready for drill testing.

Hen

The Hen property is located about 16 kilometres southeast of the Boss Mt. molybdenum mine. The property adjoins to the south, the Company's Silverboss property. The key prospects on the Hen property include, from west to east: Anomaly Creek (porphyry style copper, lead, zinc, gold), and the Hen, Dyke and Ledge (calcic skarn gold). The Hen prospect contains 2.1 meters of 3.98 g/t gold in a trench. First pass diamond drilling during 1995 and 1996 on the Hen showing returned 8.0 m of 0.80 g/t gold including 1.0 m of 1.30 g/t gold, 1.6 m of 1.00 g/t gold, 0.8 m of 2.08 g/t gold and 0.86 m of 1.98 g/t gold. Soil samples located uphill of the trench and drill holes returned 2.65 and 1.41 g/t gold that have

HAPPY CREEK MINERALS LTD.

MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

not been investigated. Approximately one kilometre along strike to the southeast of the Hen zone, the Dyke zone contains 3.5 m of 3.46 g/t gold and up to 35.06 g/t gold in grab samples. Approximately 15 metres north of this sample, a subcrop rock sample returned 2.34 g/t gold. Trenching in 2009 at the Dyke zone returned 4.0 m of 2.08 g/t gold, and 2.0 m of 4.20 g/t gold. The Ledge zone is located approximately 1.5 kilometres east of the Dyke zone and boulders returned 1.14 g/t gold and 1.1 g/t gold. In 2009, trench T-13 returned 28.0 m containing 400 ppm arsenic and 0.02 g/t gold, and 16 m of 300 ppm arsenic. Trench T-14 returned 36.0 metres of 300 ppm arsenic and 4.0 m grading 0.12 g/t gold and 0.11% arsenic that remains open in extent. Together, the Hen, Dyke and Ledge prospects comprise calcic gold skarn zones occurring over a distance of approximately 4 kilometres that is largely under-explored.

On February 13, 2012 the Company announced results from the 2011 Hen and Art-DL sampling. Rock samples contain from less than 0.01 g/t gold to 1.04 g/t gold, less than 0.01 g/t silver to 17.7 g/t silver and 2.8 ppm copper to 1,300 ppm copper. Soil samples returned values from trace to 0.10 g/t gold, 2.1 g/t silver, 480 ppm copper, 16.9 ppm molybdenum and 627 ppm zinc. Silt samples returned from trace to 0.03 g/t gold, 0.60 g/t silver, 193 ppm copper, 11.6 ppm molybdenum and 180 ppm zinc. Exploration to date has developed several targets that are thought to warrant drilling.

Art-DL

The Company's Art-DL property has an historical adit with a large quartz vein containing values up to 42 g/t gold over 1.0 m. Drilling during 2010 beneath the adit did not intersect the quartz vein or significant gold values and the orientation of the gold-bearing quartz vein in the adit remains unknown. To the southwest of the adit, drill hole GL10-3 returned 72.5 m of 4.03 g/t silver including 20.0 m of 8.5 g/t silver. These results are thought to be positive and of exploration interest. Several positive anomalies of up to 1.8 g/t gold in soil also occur that require further investigation, and much of the Art-DL property remains unexplored. The Art-DL property is thought to hold potential for sediment hosted bulk tonnage gold deposits with similarities to the Thunder Ridge and the Spanish Mountain gold deposit that are located to the south and north, respectively.

On February 13, 2012 the Company released results from 2011 sampling including the location of new showings containing 1.04 g/t gold, 17.7 g/t silver and 0.29 g/t gold, 14.0 g/t silver in quartz carbonate veins within black phyllite. These results are consistent with previous results from the property and expand the area containing positive gold and silver values. Further work is recommended to include geological mapping, trenching and drilling.

Revelstoke Property

Silver Dollar

The Silver Dollar property is owned 100% by the Company and located approximately 45 kilometres southeast of Revelstoke, B.C. A number of mineral showings and past-producing lead-zinc-silver-gold prospects are part of the Camborne Mining Camp, dating from over 100 years ago. Two are called the

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

Silver Dollar and Gillman, among others. There is an access road through most of the length of the property, and remnants of a historical aerial ore tram and mill site. In 1933, the Gillman shipped between one and 14 tonnes of ore grading 62 g/t gold, 62 g/t silver. In 1947, the Silver Pass Development Syndicate processed six tonnes of ore and recovered 9,860 grams silver, 1,378 kilograms lead and 1,009 kilograms zinc. With multiple small claim owners, there was intermittent, fragmented surface work and underground development occurring into the 1950's. Ore shipments were transported to the smelter in Trail, B.C., or to the United States. In 1984, a drill hole on the Silver Dollar zone returned 2.10 m grading 229.0 g/t silver, 1.0 g/t gold, 10.95% zinc, 4.04% lead and 0.29% copper. In 1986, a drill hole intersected 0.70 m grading 38.0 g/t gold.

During 2012, the Company completed an airborne geophysical survey and geological mapping and sampling. On May 16, 2013, the Company announced that strong precious metals occur including samples containing 50.30 g/t gold, 216 g/t silver and 4.49 g/t gold, 4496 g/t silver. Important base metal results include a 1.8m chip sample with 16.8% zinc, 3.9% lead, 1.67 g/t gold and 241.0 g/t silver.

On June 11th, 2015, the company announced it has acquired two new mineral claims located within its Silver Dollar property at the north end. These claims cover former Crown Granted claims and historical underground development in which bulk sampling and drilling of zones containing positive and locally high gold grades was conducted. The historical results include drilling from surface of 41.2 m containing 2.56 g/t gold, with a higher grade interval of 3.4 metres of 25.34 g/t gold. Underground chip sampling returned trace to 330.0 g/t gold.

The Company completed a soil geochemical survey on the newly acquired Goldfinch claim and results are pending.

The geophysical surveys geology and numerous mineralized zones support a prominent through-going favorable structure that is part of the 40 km long Camborne fault. The large scale of the fault system and numerous prospects containing positive base and precious metal values suggest potential for large and quality mineral deposits to occur.

Mineral property Transactions

The Company is active in its exploration and prospecting business, which requires from time to time, the acquisition or disposition of mineral claims depending on relative opportunity cost, market conditions and financial resources available. For mineral claims that are disposed, abandoned, or otherwise relinquished there can be no assurance that such property does not contain economic resources. The Company is registered as a Free Miner in British Columbia that allows it to stake its own mineral claims. The Company may see an appropriate opportunity to increase its existing mineral properties by staking claims directly itself, or may acquire them from arm's length individuals for cash-only payments of less than \$10,000. These transactions are conducted in the normal course of its business activity. Larger property acquisitions involving staged option payments, work commitments and share issuance are described below.

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

Highland Valley District

Rateria

In 2004 the Company acquired an option to earn a 100% interest in the Rateria Property located approximately 10 kilometres southeast of Teck's Highland Valley copper-molybdenum mine concentrator near Logan Lake, British Columbia. To earn its interest the Company paid \$155,000 to the Optionor, issued 950,000 shares and spent \$500,000 on exploration. The Company's interest in the Property is also subject to a 2.5% net smelter royalty ("NSR"). The Company at its own option may buy down the NSR by 1% for a payment of \$2,000,000, or purchase 100% of the NSR for \$3,000,000. On June 24, 2008 the Company paid the final \$50,000 and issued 250,000 shares to acquire a 100% interest in the Rateria property.

During the year ended January 31, 2009 the Company purchased a 100% interest in mineral claims totalling approximately 1,340 hectares (13.4 square kilometres) that adjoin the Rateria property to the south. The Company paid \$25,000 in cash and granted a NSR of 2% with the Company having the right to purchase the NSR for a lump sum of \$3,000,000.

On June 5th 2012, the Company announced it had acquired by staking or paying less than \$5,000 cash to arm's length vendors for a 100% interest in 309 hectares of mineral claims on the south side of the Rateria property.

On October 8th 2013, and pursuant to the terms of an Option agreement with an arm's length vendor, the company acquired the right to a 100% interest in certain minerals claims known as the Tyner Lake property. The Tyner Lake property consists of 18 mineral claims that total approximately 22.5 square kilometres in area. By way of consideration, the company will make cash payments totalling \$30,000 (\$10,000 paid) and will issue 500,000 shares (250,000 issued) at a deemed price of 15 cents per share by September 15th 2014. The property is subject to a 2% net smelter return (NSR) in favour of the Optionor, which may be repurchased by the company for \$2,000,000. On February 8th 2014, the Company announced the completion of the Tyner Lake option under an amendment. Under the amended agreement, the company paid a total of \$25,000 cash and issued 250,000 shares. The Tyner property is now 100% owned by the Company while the vendor retains the NSR as above.

West Valley

In October 2008 the Company purchased a 100% interest for \$25,000 in 49 mineral claims totaling approximately 9,175 hectares (91.75 square kilometres) that are located approximately four kilometres west of the Rateria property. Several additional claims were also acquired for less than \$5,000 in cash.

On June 5th 2012, the Company announced it has acquired the Abbot property, consisting of 2,911 hectares (29.1 square kilometres) adjoining the south side of the company's West Valley property. To earn a 100-per-cent interest in the Abbot property, the company must pay to an arm's-length vendor a total of \$15,000 in cash and issue 350,000 shares by May 30, 2013. The vendor retains a 0.5%NSR, with the company having the right to purchase the NSR for \$1,000,000.

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

On May 27th 2013, the Company announced it has completed the payments and obtained title for a 100% interest into the Abbot property which will be a part of the West Valley property going forward.

BX

On June 6th, 2011, the Company announced it has negotiated an Option agreement with an arm's length party to earn a 100% interest in the BX property located in Highland Valley, BC. The BX property is approximately 11.5 square kilometres in area and adjoins Teck's Highland Valley Copper mine property, approximately six kilometres from the former Bethlehem deposits, the first copper mine in the camp. The Company has been granted the exclusive right to acquire an undivided 100% interest in the BX property over a three year period, by paying a total of \$130,000 in cash, issuing a total of 500,000 in shares and incurring a total of \$400,000 in exploration expenditures on the BX property. Upon vesting of the Company's interest, the Optionor will hold a 2% NSR, and the Company has the right to purchase 1% of the NSR by paying \$1,000,000 in cash to the Optionor.

On February 9, 2012 the Company was notified that the vendor of the BX property had lost title to the property. On April 2, 2012, the Company announced a settlement whereby the Company received from the BX property vendor, \$35,000 in cash, return of 50,000 shares of the company, and a 100% interest in the Silver Dollar and Windflower properties located approximately 45 kilometres southeast of Revelstoke, B.C. These properties are described hereafter as the "Revelstoke Property".

Cariboo Property

In 2005 the Company acquired from three individuals, including two current directors of the Company, a 100% interest in five mineral properties located in the South Central Cariboo Region, approximately 80 kilometers northeast of 100 Mile House, British Columbia. To acquire its interest the Company issued 5,000,000 common shares and paid \$25,000 to the Optionors and spent \$160,000 on exploration. The Company's interest in the Property is subject to a 2.5% NSR, of which 1% can be purchased by the Company for \$2,000,000. The Property is comprised of 5 groups of claims known as the Silverboss, Fox, Hen, Art-DL and Hawk claim groups.

Grey

During the year ended January 31, 2008 the Company entered into an option agreement to earn a 100% interest in the Grey property ("Grey Option"), approximately 6.0 square kilometres in area that adjoin to the south of the Company's Hawk property. Under the terms of the Grey Option, the Company has the right to earn a 100% interest in the Grey property by making staged cash and share payments over 5 years that total \$100,000 cash and 300,000 common shares of the Company. During the period ended July 31 2010, the Company completed its final payment of \$60,000 and issued 150,000 shares and now owns a 100% interest in the Grey property, subject to a 2.0% NSR. Under the terms of the Grey Option with the Vendor, the Company may purchase half of the NSR from the vendor for \$1,000,000. The Grey property is combined with the Hawk property and together is now referred to as the Hawk property.

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

Gus

During the year ended January 31, 2008 the company entered into an option agreement to earn a 100% interest in the Gus Property that is approximately 25 square kilometres in area and adjoins the Company's Silverboss property. The property also includes the single Eye claim, located by itself and 4 kilometres to the northwest of the Gus property. To acquire its interest the Company must issue to the vendor 300,000 common shares and pay \$50,000 over a three year period. The Property is subject to a 1.5% NSR, which the Company can buy back at any time for \$1,500,000.

As of April 30, 2010, the Company had completed its earn-in and now owns a 100% interest in the Gus and Eye Property, subject only to the NSR disclosed above. In the future, results from the property will be included as part of the Silverboss property.

On December 15, 2008 the Company purchased from an arm's length party a 100% interest in five mineral claims totaling approximately 1,867 hectares (18.67 square kilometres) that adjoin the Company's Silverboss property and in part the former Boss mountain molybdenum mine. These mineral claims were purchased for a total of \$15,000 cash and the issuance of 50,000 shares from treasury. The Company also acquired from arm's length individuals a 100% interest in several mineral claims adjoining the Silverboss, Hen and Fox properties for less than a total of \$5,000.

Golden Ledge

During the year ended January 31, 2010, the Company entered into an option agreement with an unrelated third party to acquire one additional mineral claim (Golden Ledge) adjacent to the south side of the Art-DL property, and adjoins to the north, Spanish Mountain Gold's Thunder Ridge property. Under the terms of this new option agreement, the Company must make aggregate cash payments of \$150,000 (\$25,000 paid) issue an aggregate 850,000 common shares (150,000 issued) of the Company to the vendor, and incur \$700,000 in exploration expenditures over four years in order to earn a 100% interest in this additional claim, subject to a 2% NSR. The NSR may be purchased by the Company for \$1,000,000 for the first 1% NSR and \$1,500,000 for the second 1% NSR. During the period ending October 31, 2010, the company completed detailed soil sampling, prospecting, rock sampling and six drill holes on the property. As the drill results from the Golden Ledge property were not satisfactory, the Option has been dropped and the property returned to the vendor.

Hawk and Grey property Joint Venture

During the year ended January 31, 2010, the Company signed an Option Agreement with Jiulian Resources Inc. (TSX-V:JLR) whereby Jiulian can earn up to a 65% interest into the Hawk and Grey property by paying the Company \$150,000 in cash, issuing 700,000 shares and conducting \$1.2 million in exploration expenditures on the property over four years. Jiulian relinquished its option and returned the property to the Company in March, 2011. The Company has received data collected by Jiulian for work conducted during 2009 and 2010.

Eye Property Option

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

On July 20th 2011, the Company announced it has an Option agreement with Newmont Mining Corporation (Newmont) for the Company's Eye mineral claim (1.2 square kilometres) in south central British Columbia (B.C.) Canada. To earn a 100% interest in the Eye property, Newmont must pay the Company a total of \$368,000 in cash and perform \$280,000 in exploration, in annual stages over a five year period. If Newmont elects to purchase the property it will grant to the Company an NSR (Net Smelter Royalty) of 0.5%, with payments up to a collective maximum of \$1.5 million. In addition, Newmont will cover the underlying Royalty obligations to the previous owner. On June 18th 2012, the Company announced that Newmont has made its first anniversary (second) payment to continue its Option on the Eye property. On June 17th, 2013, the Company announced that Newmont has dropped the Eye Property Option, and returned the property in good standing until August 22, 2022.

Revelstoke Property

During the three months ended April 30, 2015 the Company acquired a 100% interest in a new tenure (Goldfinch) for \$5,000 cash. The tenure comprises approximately 20.41 hectares covering an historical developed prospect having underground workings with high grade gold.

Financial Results of Operations

The following is a summary of selected financial data for the Company for the three most recently completed years, accompanied by a discussion of those factors affecting the comparability of the data, including, where applicable, discontinued operations, changes in accounting policies, significant acquisitions or disposals and major changes in the direction of the Company's business.

Results of Operations

Three months ended October 31, 2015

The Company incurred a net loss of \$50,095 for the three months ended October 31, 2015 compared with a loss of \$219,500 for the same period in 2014. General and administrative expenses with the following accounts accounted for the decrease in the overall loss. ;

- Decrease in advertising and promotion of \$16,838 as a result of limited funding in fiscal 2016.
- Professional fees decreased by \$9,636 due to an overaccrual in earlier periods.
- Management fees and salaries decreased by \$27,947 due to planned reduction in management fees.
- Office and administrative costs increased by \$5,081 due to higher than normal transfer agent and regulatory fees..
- For October 2014 the Company recorded a \$116,000 share-based payments expense for options granted during that period. There was no like charge for the three months ended October 31, 2015.

Deferred Income Taxes

Deferred taxes are calculated using the liability method on temporary differences between the carrying amounts of assets and liabilities and their tax bases. Deferred tax assets and liabilities are measured using substantively enacted tax rates expected to apply to taxable income in the years in which those temporary differences are likely to reverse. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in profit or loss in the period that includes the substantive enactment date.

Deferred tax assets and liabilities are calculated, without discounting, at tax rates that are expected to apply to their respective period of realization, provided they are enacted or substantively enacted by the end of the reporting period. Deferred tax assets are recognized to the extent that it is probable that they will be able to be utilized against future taxable income.

Deferred tax assets and liabilities are offset only when the Company has a right and intention to offset current tax assets and liabilities from the same taxation authority and the deferred tax assets and

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

liabilities relate to income taxes levied by the same taxation authority on either the same entity or different entities which intend to settle current tax assets and liabilities on a net basis or simultaneously in each future period in which significant amounts of deferred tax assets or liabilities are expected to be recovered or settled.

Changes in deferred tax assets or liabilities are recognized as a component of tax income or expense in profit or loss, except where they relate to items that are recognized in other comprehensive income or directly in equity, in which case the related deferred tax is also recognized in other comprehensive income or equity, respectively.

The Company has financed a portion of its exploration activities through the issue of flow-through shares. Canadian tax legislation permits a company to issue flow-through instruments whereby the deduction for tax purposes relating to qualified resource expenditures could be claimed by the investors rather than the company.

A flow-through instrument comprises transfer of income tax deductions and common shares. Proceeds from an issuance of a flow-through instrument are allocated to liability and equity components in proportion, according to their respective fair values at the date of issuance. Upon renunciation of the flow-through expenditures for Canadian income tax purposes, the related flow through liability recognized in previous periods in the statement of financial position will be reversed and the related deferred tax liability will be recognized. Any difference between the liability settled and the deferred tax liability recognized is accounted for as other income or expense in profit and loss.

Liquidity and Capital Resources

The ability of the Company to continue to operate as a going concern is dependent upon its ability to obtain necessary financing to meet the Company's obligations and liabilities as they become due. As of October 31, 2015 the Company had cash and cash equivalents of \$807,571 (January 31, 2015 - \$134,136). The Company's working capital as of October 31, 2015 was \$739,705 (January 31, 2015 - \$104,796). During the quarter the Company completed a non-flow-through private placement, issuing a total of 10,000,000 units at \$0.11 per unit for gross proceeds of \$1,100,000. Each unit consists of one common share and one-half share purchase warrant exercisable into a common share at a price of \$0.15 for three years.

The Company is a mining exploration and development company with no producing resource properties, and consequently, does not generate operating income or cash flow of a significant nature at this time. To date the Company has relied primarily upon the sale of Common Shares to provide working capital for exploration activities and to fund the administration of the Company. Since the Company does not expect to generate any revenues in the near future, it will continue to rely primarily upon the sale of Common Shares to raise capital. There can be no assurance that financing will be available to the Company when required. The Company has no debt instruments. The Company has no externally imposed capital requirements.

Management Contracts

Effective February 1, 2011, the President was compensated entirely through his private company at a rate of \$10,000 per month. Effective July 1, 2013 \$5,000 of the monthly fee was being deferred until such time as the Company receives funding. Effective April 1, 2014, the President of the Company will be paid \$5,000 as an employee. Any work done in his capacity as a professional geologist will be invoiced through a corporation controlled by the President. In the event that the Company terminates this agreement without cause, it must make a lump sum payment of \$120,000, based on his current salary.

Effective July 15, 2012 the Chief Financial Officer is compensated at a rate of \$5,000 per month. Effective June 1, 2014 the Chief Financial Officer is compensated at a rate of \$3,500 per month as part of managements cost cutting program. In the event that the Company terminates this agreement, it must make a final payment of \$5,000 to the Chief Financial Officer.

Subsequent Events

The following events occurred subsequent to October 31, 2015;

- 250,000 share purchase options exercisable at \$0.23 expired unexercised.

Risk Factors

Happy Creek's success depends upon a number of factors, many of which are beyond the Company's control. Typical risk factors and uncertainties include the ability to raise financing, mineral title matters, exploration permitting or weather delays, skilled labour shortage, operating cost inflation, metal price and currency rate fluctuations, and changing legislation, regulations or the administration thereof. There is uncertainty in judging future potential value of a mineral property or claims that are deemed unnecessary and allowed to lapse or returned to a vendor. Risk factors could materially affect the Company's future operations and could cause actual events to differ materially from those described in forward-looking statements relating to the Company.

Financial Instruments

HAPPY CREEK MINERALS LTD.
FORM 51-102F1
MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

Non-derivative financial assets and financial liabilities

The Company classifies financial assets as financial assets at fair value through profit or loss, held-to-maturity investments or loans and receivables. Available-for-sale financial assets are those financial assets that are not classified as any of the above. Financial liabilities are either classified as financial liabilities at fair value through profit or loss or as other financial liabilities.

Financial assets and financial liabilities are recognized initially at fair value.

Financial assets and financial liabilities at fair value through profit or loss are subsequently measured at fair value with changes in fair values recognized in profit or loss.

Financial assets classified as available for sale are subsequently measured at fair value with changes in fair value recognized in other comprehensive income.

Loans and receivables, held-to-maturity investments and other financial liabilities are subsequently measured at amortized cost using the effective interest method.

The Company's financial instruments consist of cash and cash equivalents, receivables, reclamation bonds, marketable securities, trade and other accounts payable.

Cash and cash equivalents and reclamation deposits are classified as fair value through profit or loss and amounts receivable are classified as loans and receivables. Marketable securities are classified as available for sale. Trade and other accounts payable are classified as other financial liabilities.

Transaction costs, other than those related to financial instruments classified as financial assets and financial liabilities at fair value through profit or loss, are added to the fair value of the financial asset and financial liability on initial recognition.

Significant judgements, estimates and assumptions

The preparation of the Company's financial statements in conformity with IFRS requires management to make judgments, estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Estimates and assumptions are continually evaluated and are based on management's experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Actual results could differ from these estimates.

The areas which require management to make significant judgments, estimates and assumptions in determining carrying values include, but are not limited to:

(i) Going concern

The assessment of the Company's ongoing viability as an operating entity and determination of the related disclosures require significant judgment.

MANAGEMENT'S DISCUSSION and ANALYSIS
For the Nine Months Ended October 31, 2015 and 2014

(ii) Exploration and evaluation properties and impairment

The Company is required to make significant judgments regarding the capitalization of the costs incurred in respect to its exploration and evaluation properties. The Company is also required to make significant judgments on the ongoing feasibility of mineral exploration, and whether there are indicators that the development of a specific area is unlikely and exploration and evaluation properties should be impaired. Management has assessed impairment indicators on the Company's exploration and evaluation properties and has concluded that no impairment indicators existed as of October 31, 2015.

(iii) Deferred taxes

The Company recognizes the deferred tax benefit related to deferred losses and resource tax assets to the extent recovery is probable. Assessing the recoverability of deferred tax assets requires management to make significant estimates of future taxable profit. In addition, future changes in tax laws could limit the ability of the Company to obtain tax deductions from deferred income and resource tax assets.

The Company recognizes deferred tax liabilities when there are taxable temporary differences that will reverse and result in a future outflow of funds to a taxation authority. The Company records a provision for the amount that is expected to be settled, which requires the application of judgement as to the ultimate outcome. Deferred tax liabilities could be impacted by changes in the Company's estimate of the likelihood of a future outflow, the expected settlement amount, and future changes in tax laws.

(iv) Share-based payments

Share-based payments are determined using the Black-Scholes option pricing model based on estimated fair values of all share-based awards at the date of grant and is expensed to the statement of loss and comprehensive income (loss) over each award's vesting period. The Black-Scholes option pricing model utilizes subjective assumptions such as expected price volatility and expected life of the option. Changes in these input assumptions can significantly affect the fair value estimate.

Share Capital

Common shares, stock options, warrants, and agent's warrants as at December 22, 2015 are as follows:

	December 22, 2015
Common shares	72,187,630
Stock Options	3,425,000

Agents options	Nil

Future Outlook

Management monitors the currently uncertain global financial market conditions, especially pertaining to commodities and resources. It evaluates and adjusts budgets and work performed as results are received, market conditions, financial resources, or government exploration permit requirements change. It may adjust property expenditure allocation, acquire, hold or dispose of mineral tenure on an on-going basis.
